

Carbendazim 98%TC

Carbendazim is a widely used, broad-spectrum benzimidazole fungicide and a metabolite of benomyl. It is also employed as a casting worm control agent in amenity turf situations such as golf greens, tennis courts etc. and in some countries is licensed for that use only.

Function:

The fungicide is used to control plant diseases in cereals and fruits, including citrus, bananas, strawberries, pineapples, and pomes.

Benifits:

- Carbendazim is a fungicide for the control of a wide range of fungal diseases such as mould, black spot, mildew, scorch, rot and blight in a variety of crops.

Note:

Studies have found high doses of carbendazim cause infertility and destroy the testicles of laboratory animals..
